

## **Storm Water Notes**

**This project shall comply with all requirements of the City of Santee and State of California Water Quality Control Board, San Diego Region.**

1. The contractor shall implement best management practices (BMPs) during all phases of construction.
2. Sufficient BMPs must be installed to prevent silt, mud, or other construction debris from being tracked into the adjacent street(s) or storm water conveyance systems due to construction vehicles or any other construction activity. The contractor shall be responsible for cleaning any such debris that may be in the street or conveyance system at the end of each work day or after a storm event that causes a breach in the installed construction BMPs.
3. Storm water pollution prevention devices and or practices shall be modified as needed as the project progresses to ensure effectiveness. If at any time, BMPs are found to be intentionally disabled, run-over, removed, or otherwise ineffective, they shall be modified and replaced immediately.
4. Trash and construction solid wastes shall be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind. The storage of all construction materials and construction wastes must be protected against the potential release of pollutants into the environment.
5. A concrete washout shall be provided on all projects which propose the construction of any concrete improvements that are to be poured in place on the site.
6. All BMPs shall be maintained in working order at all times. All slopes that are created or disturbed by construction activity must be protected against erosion and sediment transport at all times.
7. If trenching/digging activities are not completed within one day, proper BMPs will be implemented.
8. If debris or materials will be stored for longer than one day, proper BMPs will be implemented.
